Mission

Success Academy is redefining what’s possible in public education. Our dual mission is to:

• build exceptional, world-class public schools that prove children from all backgrounds can succeed in college and life, and

• advocate to change public policies that prevent so many children from having access to educational excellence and opportunity.
Our Unique K–12 School Design

At Success Academy, we believe every year of a child’s education is critical. That’s why we fine tune each of the 13 years your child will be at SA. Starting in kindergarten and going through high school graduation, we map out each year to advance your child’s intellectual development deliberately and holistically.

Each grade’s learning goals are designed to lead your child on a journey of exploration that builds academic strength and personal confidence — and ensures they are fully ready for the next grade.

At Success Academy, we constantly ask ourselves: “Would our scholars choose to come to school, even if they didn’t have to?” The answer — a resounding yes! — results from setting the bar high while providing endless opportunities for scholars to explore, engage, and laugh in our classrooms. From elementary school through high school, we commit ourselves to the long-term development of our scholars, supporting their ultimate success in college and in life.
The promise we make to families is that every Success Academy scholar has a guaranteed seat and an excellent, free public education for every leg of their 13-year educational journey. When they start middle school, they will be ready. When they enter high school, they will be well-prepared. When they graduate from high school, they can expect their hard work to pay off with admission to a great college or university and support in obtaining financial aid. Most importantly, your scholar will be well prepared to excel and graduate from college in four years.
At Success Academy, we work hard to ensure that scholars develop a love of learning and achieve the highest levels of academic mastery—but we can’t do it alone. As parents, you play an essential role in supporting your scholar’s academic progress.

From getting your child to school on time every day and reading to them at home to practicing math facts and spelling words with them and checking that their out of school learning assignments are done, your ongoing effort and oversight are essential to helping your child excel.
We believe that schools share an obligation with families to teach kids right from wrong, and that character development is an important part of schooling. To maintain a school culture that promotes learning and respect for others, Success Academy has an honor code that applies to the entire school community. Adhering to the honor code means that scholars will act truthfully with high moral character both on and off school property.

We hold dear six core values, which we teach and preach! These are not simply slogans on a wall — they are true values that everyone in our school community lives and breathes every day. Starting with adults and filtering to children, respect for others and proper behavior are taught, modeled, expected, and rewarded.

**Agency**
Every member of our community takes ownership. We take responsibility for making sure that our schools and scholars are reaching the highest possible standards across the board.

**Curiosity**
Our schools are fueled by wonder. Scholars, teachers, and staff always ask, “What if?”

**Try & Try**
Our entire community understands that tackling tough challenges takes elbow grease, grit, and perseverance.

**Integrity**
We are honest, open, and transparent.

**Others**
We never forget to look out for one another. From helping someone on a project to smiling in the hallways, we build a community of mutual respect and support.

**No Shortcuts**
Excellent learning takes time and effort.
We designed our elementary school curriculum to help children fall in love with learning through reading voluminously, solving complex math problems, and engaging in scientific inquiry. Each day is filled with opportunities for scholars to find their own voice to express their ideas, collaborate on class projects, and discover new artistic talents.

We firmly believe that doing is at the core of learning. At Success Academy, scholars receive only 80 minutes of direct instruction a day — about 10 minutes per subject — leaving the majority of the day for hands-on learning, guided inquiry, and discussion to develop ideas and creative expression.

Giving scholars the opportunity to do the intellectual heavy lifting makes learning not only engaging and fun, but also deep and lasting. This progressive approach also prepares our scholars for the rigor and independence needed to succeed in college and in life.
English Language Arts

Our approach to teaching literacy stems from our belief that if children love reading and read exceptionally well, they can teach themselves anything.

The SA literacy curriculum introduces scholars to great literature and emphasizes critical thinking, knowledge building, and the thoughtful discussion of ideas. Kids read and analyze poetry, biography, history, fiction, myths, and fables, and write copiously in a range of genres.

Reading

To promote avid reading, scholars read and participate in thoughtful, text-based discussions throughout the school day. Our reading curriculum includes:

Independent Reading

At the heart of our literacy curriculum is sacred independent reading — a time when scholars get lost in books they love. Each classroom is stocked with a generous library of books selected for their rich language and storylines and beautiful illustrations. Scholars choose books that interest them and are “just right” for their level of reading fluency — whether it is
emergent story books for kindergartners or chapter books for third graders — and apply the habits of great readers. We get to know our scholars as readers by listening to them read and coaching them to become better readers during this focused time. Through discussions about their books with partners and the whole class, scholars are encouraged to think critically about texts and share in the joy of reading.

Guided Reading

In guided reading, a teacher works with a small group of scholars who are reading at the same level. The teacher chooses a book that is just a bit too hard for them to read independently and supports them so that they can successfully navigate the text. During guided reading, the teacher sets ambitious goals for scholars so they can grow as readers. Through close study, coaching, and discussion in a small group setting, scholars are able to read more complex texts with increasing independence.

Shared Poem (Gr K–1)

Shared poem occurs four times a week and consists of reading poems together as a class to develop scholars’ oral language, phonemic awareness, and comprehension, and to enjoy the fun of language. Shared poem inspires scholars as they revel in the enjoyment of poetry and builds confidence in their ability to make meaning from the text.

Success for All (Gr K–1)

In kindergarten and first grade, scholars learn phonemic awareness and phonics — the foundation of reading development — through a research-based phonics program, Success for All. In daily direct instruction that is fast paced and engaging, scholars build phonemic awareness and decoding skills that strengthen oral language and build reading fluency and comprehension.
Direct instruction is followed by ample time to apply and practice by reading and discussing decodable books aligned with the skills covered that day and in prior lessons. Through this powerful program, kindergarten and first-grade scholars quickly master the foundational reading skills they need to read independently.

Read Aloud
We build scholars’ critical thinking skills and passion for literature by reading aloud rich and engaging books. These books are often more challenging and sophisticated than what scholars can read on their own and have been selected for the quality of their writing and the complexity and resonance of their ideas, themes, and arguments. Teachers guide scholars to unpack the meaning of the text, think analytically about the author’s choices, and discuss and debate the ideas with partners and the whole class. Our goal is for scholars to apply these same habits of mind to understand the books they read independently.

Writing

Our approach to writing sets scholars up to become skilled, passionate writers who convey their ideas with clarity and purpose. Scholars study the work of great writers to give them a vision for the type of writing they will do. Every day scholars write, emulating the techniques of the writers they’ve studied. Their assignments include narrative writing, opinion pieces, historical fiction stories, poems, and literature responses.

At the heart of our writing program is the belief that writers improve through frequent practice and revision. By providing regular opportunities for scholars to write independently, receive feedback, revise, and publish their work, we build authentic engagement and the habits of great writers.

Strong writing rests on the grammatical rules underpinning language, and we believe it is our responsibility to help scholars master these rules. Scholars learn the role of grammar in effective communication by paying attention to the impact of language in the texts we read and in their own writing and speaking. In grades 3 and 4, scholars complete daily minilessons that improve their ability to write with clarity and precision.
Project-Based Learning

Our scholars learn the thrill of becoming experts in a subject through project-based learning (PBL), when they have extended time to immerse themselves in a fascinating topic.

Two times each year, Success Academy scholars explore subjects in depth over six to eight weeks from a cross-disciplinary perspective — social studies, science, reading, writing, math, and art. Scholars work collaboratively to build expertise, develop insights, and apply their knowledge through project work. Our scholars become obsessed with these topics, and that’s the idea! At the close of each unit, families are invited to classrooms to view PBL museums and performances showcasing scholars’ newly gained expertise.

SEE PBL UNITS, PAGE 15 →
PBL UNITS

GRADE

K  Bread: Beyond the Baking, Farm to Table

1  School: How it Works!, The Arctic

2  Brooklyn Bridge, The Wonder and Diversity of Birds

3  Iroquois and Lenape, Immigration and Ellis Island

4  American Revolution, Westward Expansion
Math

Our approach to math gives scholars powerful conceptual understanding along with computational speed and fluency so they can confidently and productively apply mathematical skills in new and unfamiliar contexts and use their understanding to solve real-world problems.

Success Academy’s acclaimed and highly rigorous math program incorporates elements from a variety of curricula and approaches, including TERC Investigations, Contexts for Learning Mathematics, and Cognitively Guided Instruction. The elementary school sequence develops scholars’ number sense, counting ability, and place value understanding, and builds mastery of operations, geometry, fractions, measurement, and data.

Lessons within a math unit are centered on tackling complex, multi-dimensional problems that have correct answers but innumerable ways to arrive at these answers. Scholars must think creatively and independently to develop their own approach, which strengthens their ability to apply prior knowledge to new challenges and deepens their conceptual understanding. Our math program also develops scholars’ computational skills through the short daily practice of “math facts.”
Mini-Lessons

During mini-lessons, scholars gather on the rug, where they solve a series of problems in quick succession and discuss their thinking. This practice develops skills and fluency in counting, number sense, and concepts such as rounding and telling time.

Math Workshop

Math workshop introduces scholars to new math content in topics such as geometry, fractions, measurement, and data. It also supports conceptual understanding of counting, number sense, and place value. Scholars work together to solve problems and learn from each other during whole class discourse.

Number Stories

During number stories, scholars develop problem-solving skills by independently working to solve unfamiliar, contextualized problems. Rather than showing scholars how to solve these problems and directing them to copy a particular approach, teachers challenge scholars to come up with their own strategies so that they become increasingly flexible mathematical thinkers. Selected scholars share their strategies for whole-class discourse.

No Hesitation Math (NHM)

NHM ensures that scholars can quickly, accurately, and flexibly solve mental math facts. Scholars begin in first grade with addition and subtraction facts. Beginning in third grade, they expand to multiplication and division. By progressively solving groups of math facts, scholars move beyond rote memorization to see the relationships between facts, an exercise that supports fluency.
Jar (Gr K–2)

Counting is the foundation of all math. Counting jar helps scholars to become fluent with number names and number sequences, and to understand how numbers correspond to objects. Scholars begin in kindergarten, using counting jar to learn the basics of counting and then moving toward strategies involving grouping.

In second grade, scholars move on to money jar, in which they develop knowledge of money and also grapple with the pre-multiplication concept of grouping.

SEE MATH TOPICS, PAGE 19 →
## MATH TOPICS

### GRADE

**K**
- Falling in love with counting; measuring length; place value; combinations of 10; counting games; shapes and navigation; extending number sense (comparing amounts); organizing and collecting (the number system); patterns

**1**
- Counting; place value; early addition and subtraction; paths, turns, and polygons; linear measurement; grouping and remainders; addition on the open number line; data analysis (pictographs); patterns; counting money

**2**
- Counting money; exploring geometry; early Algebra; subtraction on the open number line; measuring length; place value, addition, and subtraction; even and odd numbers; data analysis (bar graphs); patterns

**3**
- Early multiplication and division; area of rectangles; equivalent fractions and comparing fractions with same denominators; rounding data (bar graphs and line plots); measuring length, weight, and mass; identifying and comparing shapes; multiplicative comparison

**4**
- Place value and large numbers; multiplication with large numbers; place value and division; equivalent fractions and comparing fractions with different denominators; data analysis (line plots); drawing and measuring angles and analyzing shapes; decimals; unit conversion
Science

The Success Academy science program is like none other in the country. Five days a week, beginning in kindergarten, Success Academy scholars receive hands-on, inquiry-based science with a dedicated science teacher. Our unique commitment to science ignites a passion for the subject early in life, builds a comprehensive foundation of knowledge, and teaches scholars to investigate and analyze real-world problems critically and systematically, grounded in a strong base of evidence.

Scholars conduct investigations and discuss observations, data, and results in the same way true scientists do. We incorporate the three main disciplines of science — life, physical, earth and space — into each year’s curriculum, as well as engineering.

Science units are grounded in anchoring phenomena that are complex or puzzling. Scholars participate in different types of activities that advance their ability to reconstruct what they know about scientific ideas based on evidence from lessons or texts and
observations and ideas raised in classroom discussions. Science lessons launch with a challenge or question presented by the teacher: Scholars may be asked to determine how to make a lightbulb light up or compare the speed at which different objects fall to the floor. After scholars work collaboratively on the challenge and record their observations, they participate in rich discussion about their discoveries, during which the teacher guides them to a deeper understanding of the scientific principles embedded in the lesson.

Finally, scholars discuss or write their conclusions that grow in sophistication over the course of elementary school. Scientific concepts are revisited at increasing levels of depth, complexity, and rigor as scholars progress through elementary and middle school. By high school, scholars are prepared to excel in Advanced Placement exams across scientific disciplines.

SEE SCIENCE EXPERIMENTS, PAGE 22 →
SAMPLE SCIENCE EXPERIMENTS

GRADE

K

Use a hand lens and your senses to explore sea shells and fossils (nature of science, senses); design a Rube Goldberg machine (forces and motion, engineering); determine how to predict a hurricane (weather)

1

Combine different scientific tools to create “super senses” (human senses, biomimicry); design multiple rides and games for an amusement park (engineering, properties of matter); experiment to determine what seeds need in order to germinate into plants

2

Determine whether a mystery object is a solid, liquid, or gas (structure of matter); model different sounds using knowledge of waves (sound, energy); discover how invasive species affect the Hudson River ecosystem (ecosystems)

3

Explore, using chocolate, whether it is possible to create an infinite amount of matter (conservation of matter); use models of DNA to determine the traits of the next generation of Eggies (genetics); use weather maps to determine the relationship among cloud coverage, temperature, and precipitation (water cycle); build a race-car track (engineering, forces, and motion)

4

Make a magnetic crane (magnetism, forces); build a circuit tester to explore properties of conductors and insulators (electricity, energy); create a model showing how the phases change as the moon revolves around Earth (Earth’s movement); explore reversible and irreversible changes as an introduction to chemistry (properties of matter)
Field Studies

The field studies program at Success Academy ignites curiosity, infuses joy into the school day, and exposes scholars to cultural experiences and institutions across New York City and beyond.

Our scholars live in the greatest city in the world, and we take advantage of it! Through trips that include visits to farms, museums, theaters, and the circus, Success Academy scholars make connections between classroom learning and the real world, broadening their knowledge and experience. These trips not only enhance scholars’ learning by giving them opportunities to immerse themselves in richly diverse environments, but also create memories that all Success Academy scholars share.
Typing (Grades 2-4)

As we move toward a paperless society, we prioritize preparing scholars to actively participate in a digital world. Starting in second grade, scholars improve their key-boarding skills through the use of a robust typing program, which includes customizable assessments and self-pacing to increase scholars’ preparedness for middle school and beyond.
Choice Time and Blocks

Five days a week for hour-long periods, our kindergartners head to the blocks room or stay in their classrooms and choose among stations dedicated to sensory materials (clay, play dough), building materials (Legos, Tinkertoys), dramatic play, art, reading, creative writing, or board games. Scholars participate in each activity — blocks or choice time — for two days in a row, giving them extended time to work on projects in which they are deeply engaged. This dedicated playtime fosters creativity and teamwork by giving scholars the opportunity to freely engage in self-directed play with their peers.
Recess

Recess is a critical part of a scholar’s day — and it is not optional!

Our scholars want (and need) a break from the rigors of the academic day and the opportunity to exercise outside and socialize with their peers. Scholars have the option of free play or organized games and activities supervised by teachers.
Whole Child

A great education consists of more than just rigorous academics. We provide numerous opportunities for scholars to explore talents and interests outside of reading, writing, math, and science.

Success Academy schools offer a robust selection of “specials” and electives that include art, sports, and, depending on the school, chess, dance, music, or theater. We view these non-academic subjects as critical parts of learning that add joy, build confidence, and foster a love of school.

Scholars participate in one special (grades K-2) or elective (grades 3 and 4) for 45 minutes per day. In grades K-2, scholars rotate through all specials available at the school; in grades 3 and 4, scholars select two electives per semester.
The Arts

The arts are a vital way for scholars to express themselves, develop new talents, and explore their own creativity. In visual arts, scholars gain the tools they need to navigate the visual world while becoming careful observers and problem solvers. As artists, they grow into passionate “meaning makers,” using art to explore and engage with their own ideas and the world around them. Through independent and collaborative experimentation with various materials and mediums — including clay, collage, digital art/photography, drawing, painting, printmaking, and textiles — scholars gain technical skills and confidence in their ability to express themselves visually. Scholars are also exposed to the work of great historic and contemporary artists and art history concepts, which provide them with a baseline for critical thinking, points of connection, and an understanding that they are part of a larger global artists’ community.

In performing arts, scholars focus on music, dance, or theater and explore a variety of genres, styles, influences, and artists. Scholars develop technical and creative facilities in the subject while telling the stories of their imaginations, their lives, and their communities through a combination of existing work and original pieces. Scholars showcase their work from performing arts classes at performances open to the entire school community.
Chess

The Success Academy chess program provides rigorous, engaging, and hands-on chess instruction that gets kids to fall in love with thinking. Our chess teachers explain the basic moves and rules of the game, and after learning these mechanics, scholars quickly develop the strategies needed to checkmate their opponent. Learning and playing chess sharpens scholars’ analytical instincts and teaches them to think strategically, control their impulses, make well considered decisions, and compete with confidence.

Scholars have an opportunity to join their school’s competitive chess team and may be selected to compete in local, state, and national tournaments — at which our teams regularly place among the top in the nation!

Sports & Clubs

We offer a variety of school-based clubs open to all scholars at each school — considered vital outlets for creativity, self-expression, and leadership. There are two tiers of club offerings at every elementary school:

After-School Clubs: After-school clubs are offered to select students based on tryouts, in-school evaluation, commitment, and interest. These clubs run year round with weekday practices, as well as some weekend and travel commitments.

Network Clubs: Scholars from across multiple Success Academy schools are selected to participate in these competitive and selective programs. Mostly year-round commitments, these clubs offer scholars the opportunity to participate in multiple levels of competition, including local, regional, and national. Sports Network clubs, which include soccer and basketball, typically practice during the week and once on weekends. All Network clubs require travel to centralized locations for practice and other locations for competitions.
Academic Intervention and Sprint

Success Academy has a profoundly innovative schooling model that achieves outstanding results at scale, and our approach to supporting children with the highest educational needs, which we call Sprint, is just as radical. Many of the techniques associated with special education classrooms — such as small-group instruction, the use of manipulatives, frequent assessments, and individualized learning goals — are standard for all of our scholars at Success Academy. We believe that the best way to support most children requiring special education services is not to offer a separate education, but to help them close in on the academic benchmarks we set for all children. We purposefully expand on our general model to help these scholars make academic progress.
All of our schools offer Integrated Co-Teaching (ICT) classes in grades K-12, and 12:1:1 classes in grades we believe are most appropriate for scholars requiring this service; these may change over time. We also provide a targeted reading intervention program to accelerate the learning of readers who are behind in grades 2-4. Each school has a dedicated Sprint specialist and/or associate who manages the entire Sprint process and works alongside parents, the Department of Education, school leaders, and teachers to ensure scholars are being assessed and receiving the services that will help them reach their highest potential.

Our approach enables scholars with special needs to thrive:

- On the 2019 state exams, 95% of our scholars with disabilities passed math and 77% passed English (compared with 18% and 16% citywide).

- In the most recent (2018) NYC Department of Education survey administered to SA parents, 87% of Success Academy parent respondents who have children with disabilities strongly agreed or agreed with the statement: “My child’s school works to achieve the goals on my child’s Individualized Education Program.”
English Language Learners

English language learners (ELLs) at Success Academy are not assigned to a separate program or track; rather, they are fully immersed in the English language from day one, right alongside their English-speaking peers. ELL scholars receive a range of special supports, including one-on-one tutoring and small-group instruction as needed. Like all scholars, they are encouraged to present their ideas to their class and actively participate in discussions.

This approach — full immersion with support — allows scholars to quickly develop their English language skills and reach high levels of academic achievement.

- On the 2019 state exams, 97% of our English language learners passed math, and 86% passed English (compared with 19% and 9% citywide).
- At SA, most ELLs become proficient in English within two years, compared to five or more years at district schools.

Para obtener información en español y presentar una solicitud, visite es.SuccessAcademies.org
Please note: This is a sample schedule. Daily schedules will vary by school and grade; however, the curriculum is the same across all schools. Starting in first grade, for example, the block schedule for literacy and math allows more time for discussion and revision in the school day. The content within blocks differs depending on the day — scholars may focus on writing during the literacy block on one day and on close reading of a short text during that block on the following day. The longer period of time dedicated to particular content or skills allows scholars to deepen their knowledge and strengthen connections across subject areas.

Welcome to Success!

Success Academy’s powerful, rich, and comprehensive curriculum — developed, scrutinized, and refined over 16 years — is designed to ignite scholars’ curiosity and love of learning, while cultivating independence and critical thinking. We want all scholars to take ownership of their learning and develop keen interests and passions. Reach out to your teacher to schedule a visit anytime. We look forward to working with you to support scholars on this exciting intellectual journey!
